

Switch statements

I'm away again today, but here's another tool to add to your coding toolkit.

SWITCH STATEMENTS

Work just like an **IF-STATEMENT**, except in certain situations, can clean up and make your code look much nicer. (Never underestimate the value of nice, clean written code!)

Here's an if statement that checks what the day is:

```
string day = "Monday";

if (day == "Monday")
{
    MessageBox.Show("Start of the week!");
}
else if (day == "Friday")
{
    MessageBox.Show("Almost the weekend!");
}
else
{
    MessageBox.Show("Regular day.");
}
```

There should be nothing new about that code, we've worked with IF Statements a lot.

Here's the same code, but using a **SWITCH STATEMENT**

```
string day = "Monday";

switch (day)
{
    case "Monday":
        MessageBox.Show("Start of the week!");
        break;

    case "Friday":
        MessageBox.Show("Almost the weekend!");
        break;

    default:
        MessageBox.Show("Regular day.");
        break;
}
```

```
string day = "Monday";

switch (day)
{
    case "Monday":
        MessageBox.Show("Start of the week!");
        break;

    case "Friday":
        MessageBox.Show("Almost the weekend!");
        break;

    default:
        MessageBox.Show("Regular day.");
        break;
}
```

As you can see, we're doing a **SWITCH** on the variable **day**.
Each case is a specific value we're checking for.

Couple things to watch out for

- The regular colon (:) after the case. Don't use a semi colon
- "break" after each case. Which kicks you out of the switch statement once you've found the correct case
- "default" which acts as the "default case". Just like the "else" statement.
If no case is met, the default case will activate

Project

Create a program that allows the user to select a school subject from a group of radiobuttons.
(Include at least 5 possible school courses)

Store the course they've selected in a variable called "course"

Create "submit" button that when clicked does the following:

Has a switch statement on "course" variable

- Display:
 - A custom message
 - A recommended career
 - A difficulty rating out of 10

Show the results in label
